OptiPEAK TDL600
Moisture in Natural Gas Analyzer

The next generation TDLAS Analyzer for automatic online measurement of moisture in variable compositions of natural gas and biomethane. The OptiPEAK TDL600 Tuneable Diode Laser Analyzer employs the latest techniques in laser absorption spectroscopy and signal processing power to offer a robust high performance analyzer, designed specifically for the measurement of moisture in natural gas. This non-contact technology requires minimal maintenance, even in demanding applications such as changing methane concentrations or sour gas. The analyzer is fully hazardous area certified and delivers class-leading measurement performance, stability and detection sensitivity.

Applications
- Natural gas glycol dehydration
- Natural gas transmission monitoring
- Custody transfer
- Natural gas storage
- Offshore export pipeline natural gas
- LNG receiving / re-gasification plants
- Vaporized NGL
- Biomethane

Highlights
- D-MET system: Factory ready for varying gas compositions e.g. after stream blending, in shale gas or biomethane
- Operating range down to 1 ppm\textsubscript{v}
- Sour gas compatible
- Simple installation and setup
- Low maintenance
- IECEx, ATEX and cQPSUs certified for EExd flameproof
- Integrated sample handling
- Proven Michell Instruments quality: 40 years of expertise in moisture measurement built into the design
The control of moisture and hydrocarbon dew point is critical for the operational safety and efficiency of the plant equipment in upstream through to downstream processes.

We at Michell Instruments have been developing expert moisture sensing instruments and systems for 40 years. Over this time, we have gained extensive knowledge of applications in natural gas with over 1000 analyzer installations in sites across the globe. Today Michell Instruments offers customers in the oil and gas industry a suite of complementary moisture and hydrocarbon dew-point analyzers and systems.

The OptiPEAK Difference

Performance
- High accuracy with lower detection limit of <1 ppm
- Range of 1 to 1000 ppm

The OptiPEAK TDL600's lower detection limit (LDL) of less than 1 ppm makes the instrument a class leader in single path TDLAS moisture analyzers currently commercially available.

The maintenance-free, simple dual pass cell offers reliable measurement results throughout its range. It combines sensitivity and robustness without the high top-end range limit which could make the analyzer likely to saturate quickly at higher moisture levels. This is sometimes the case with comparable, costly and difficult to maintain multi-pass (Herriot) cells. With its accuracy of 1 ppm, the analyzer is future proof and comfortably exceeds the requirements of the main international natural gas quality harmonization guidelines in Europe and United States.

Dynamic background gas compensation
- D-MET — active gas composition compensation for multi-source dynamic gas streams: shale gas and biomethane ready

Natural gas stream compositions can vary. In some applications it is difficult to use an older generation TDL instrument which can only be tuned to one defined gas composition. Michell Instruments’ next generation TDL hygrometers overcome this limit. The OptiPEAK TDL600 utilizes the innovative D-MET System, dynamic background gas compensation. For the user, this means that the moisture measurement is virtually independent of changes in the methane level. No further manual correction factors are required.

Reliability
- Signal drift reduction — built-in, continuous laser optimization
  Tuneable diode lasers can drift. This inherent property of diode lasers can lead to reduction in sensitivity and drift in measured readings. The OptiPEAK’s built-in continuous laser optimization system ensures that the laser remains locked to the correct water absorption peak for the highest measurement integrity at all times.
- High-accuracy temperature control
  For the optimal performance of any TDL hygrometer the temperature stability is of highest concern. The OptiPEAK series not only utilizes the highest quality laser with exceptional life span, but also has a sophisticated multi-stage control system to maintain the temperature of the laser to within tight limits.

Simplicity
- Human Machine Interface (HMI)
  The TDL600 provides a highly intuitive, color, menu-driven interface, utilizing a capacitive touch pad. This allows operation and interrogation of the analyzer in the field with no need for a hot-works permit. Navigation is easy and there is no need for a stylus.
- Easy integration into existing control systems
  The OptiPEAK TDL600 is equipped with 3 programmable 4–20 mA analog outputs and a digital output utilizing the widespread ModBus Protocol for easy connection to a SCADA or other user-defined data acquisition system.

- Integrated sampling system
  The OptiPEAK series is supplied with a high quality, in-house designed, sample conditioning system that is optimized for the applications in natural gas as well as the high speed of response of the analyzer.

- Remote application software supplied as standard
  Allows remote control and configuration of the analyzer to simplify operations on large, distributed locations.

Reduced cost of ownership
- Minimum installation and maintenance
  With its integrated sampling system and small footprint, the OptiPEAK TDL600 can be easily retrofitted into existing plant infrastructure. Due to the inherent stability of the instrument, regular field calibration is not required under normal operating conditions. The analyzer will perform reliably for many years with just basic maintenance and housekeeping.
- Built-in self verification
  The OptiPEAK TDL600's innovative self-verification and self-compensation system checks itself against calibration data on every update cycle, adjusting if necessary, without the need for an additional gas reference cell. This function is extremely useful after a system upset — there is no need for a lengthy setup procedure.
The Moisture Specialists:
We have the solution for your moisture sensing needs

With 5 proprietary moisture sensing technologies, Michell Instruments will tailor solutions to best fit the specifics of your application, as well as the project budget.

Relative Humidity Sensors:
Designed for a broad range of heavy industrial and process industries.

Ceramic Sensor Technology:
3rd generation of metal oxide for natural gas applications at high pressure (CNG) and economical, easy gas processing applications.

Chilled Mirror:
For precise reference measurements at the highest accuracy and NPL or NIST traceability.

Quartz Crystal Microbalance:
For fast, precise measurement at low ranges in changing backgrounds.

TDLAS:
For fast, precise and low maintenance measurement in natural gas from 1000 ppm, down to 1 ppm.

**Environmental Conditions**
- **Indoor version**: +10 °C to +45 °C
- **Outdoor version**: -20 °C to +45 °C
- **Outdoor with cooling option**: -20 °C to +55 °C

**Electrical Specifications**
- **Supply voltage**: 110 V AC or 230 V AC 50/60 Hz
- **Power requirements**
  - Indoor system: 80 W
  - Outdoor system: 180 W
- **Analog signals**
  - Input: 2 x 4–20 mA user configurable
  - Output: 3 x 4–20 mA, 3 alarms 250 V AC, 3A (volt-free contacts)
- **Digital communications**: RS485 ModBus RTU
- **Data logging**: Logs all process variables with a user selectable sample period in the range of 10s to 1 day

**Physical Specifications**
- **Sample flow rate**: 1 Nl/min cell sample, 1 to 5 Nl/min sample filter by-pass
- **Inlet pressure**: Maximum 1450 psig (100 barg)
- **Outlet pressure**: Cell vent 0.7 to 1.4 bara, Filter by-pass maximum 3 barg
- **Enclosure type/ packaging**: Aluminium alloy, explosion proof, polyester coated, IP66, NEMA 4
- **Gas connections**: 1/4” NPT (F)
- **Weight**: 40kg (88lbs) (without sampling system)
- **Sample system enclosure**: 304L or 316L stainless steel
- **Hazardous area certification**
  - ATEX: II 2 G Ex d ib op is IIC T5 Gb
  - IECEx: Ex d ib op is IIC T5 Gb
  - cQPSus: Class I, Division 1, Groups A, B, C, D, T5
  - Tamb: -20 °C to +60 °C, IP66
  - TC TR Ex: Ex d ib op is IIC T5 Gb

*If installed outside, the analyzer must be shaded from direct sunlight to prevent heating effects through sun radiation
